MACHINE FOR CARRING OUT THE IMPACT CUT RESISTANCE TEST FOR GLOVES MODEL 5044-A

DESCRIPTION

Test procedure for determining impact cut resistance for gloves fabrics, leather and other materials.

Gloves and arms guards against cuts and stabs by hand knives.

TECHNICAL CHARACTERISTICS

- In accordance with Standard EN 1082-3:2000 Part 3.
- Variable height and weight of blade supporting block in accordance with Standard.
- Manual block elevation system.
- Positioning and releasing system for the blade holder block by electromagnet.
- Test piece holder support for gloves.
- Free falling system of the support with low friction index.
- Display of the speed before the impact.
- Blade holder block in accordance with Standard related to gloves.
- Protective system against accident at the impact area.
- Protective cage for the perimeter (optional).
- Round bubble level.
- Working voltage of 220 V single-phase 50/60 Hz.
