FRANCISCO MUÑOZ IRLES, C.B.

MACHINE FOR CARRING OUT THE IMPACT CUT RESISTANCE TEST MODEL 5044

DESCRIPTION

Test procedure for determining impact cut resistance for gloves and protective clothing.

TECHNICAL CHARACTERISTICS

- In accordance with Standards: EN ISO 13998, EN 13595-4 and EN1082-3.
- Variable height and weight of blade supporting block in accordance with Standard.
- Manual block elevation system
- Positioning and releasing system for the blade holder block by electromagnet.
- Easy change of test piece holder support to test gloves or clothing.
- Free falling system of the support with low friction index.
- Display of the speed before the impact.
- One blade holder block with easy change of weight and position of the blade in order to be in accordance with both Standards.
- Protective system against accident at the impact area.
- Protective cage for the perimeter (optional).
- Round bubble level.
- Working voltage of 220 V single-phase 50/60 Hz.
